

Drain Output Record

- Record the output in cc's on a per 24 hour basis
- Keep the skin around the drain clean, dry, and bandaged. Please change the bandage each day or if it becomes wet or saturated.
- Strip the drain tube 2 or 3 times a day. This is best done if your hand is soapy wet.
- There is a stitch tied around the drain tube to keep it attached to you. If the stitch breaks please call the office. (502) 721-0330.
- I prefer that you stay on antibiotics while the drain(s) are in. If you run out of antibiotics please call the office for a refill.

Date	Drain 1	Drain 2	Drain 3	Drain 4
